Project Description

What we are basically doing is creating an interactive story using code. You have to follow all the requirements in order to finish this project. There are five steps or requirements of this project, and each step or requirement has sections to it. For number one you have to you have to create a project description in your own words just like this. Then you need to create a task list on google keep and create a flow chart on lucid chart. You have to keep adding into your task list and your flow chart has to be finished in order to continue. For number two you have to write your flow chart story into code. For this you cannot use the alert, prompt, or confirm methods. You have to use clickable buttons and arrays in your code for the project. For number three check your code. Checking your code like proper format, indenting, and seeing if it should be capitalized or not. Your code should be commented. Also make sure that your code does not repeat so use loops. For number four progress into the twelve steps of the hero's journey. Each branch should include two or three options. Also your story is supposed to have three unique beginnings and three unique endings. For number five keep a daily journal of your progress and check mark them and write reflections after everyday on a google document.
